AB- <NV> NOVELTY - A digital document such as check is stored in a document
server of an item processing center, and is delivered electronically to
a demanding bank personnel or other **authorized account holder** ,
after authentication by an on-line banking center.|
AB- <BASIC> USE - For use by financial institutions, business, government
agencies, individuals, for home banking for delivering check and other
digital document through on-line banking center, to make payments
internationally.

ADVANTAGE - Checks are stored and delivered electronically and
hence provides secured and easy bank transactions. Since documents are
retrieved on a demand basis, a need for increase in the resource usage
with respect to Internet is eliminated. The technique can be integrated
with any type of on-line banking solutions without large modifications
in the existing system.

DESCRIPTION OF DRAWING(S) - The figure shows the flowchart
explaining the check-on-demand server verification during document
delivery.

AB- <NV> NOVELTY - A verb table containing a list of commands is recovered
from an account configuration file specifying module which is
accessible by an account holder. The verb table is stored in master
verb table which specifies every command **authorized** for the **account
holder**. Command from user is validated using master verb table and if
the command is valid command is executed by calling a corresponding
function within the module.|

AB- <BASIC> DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the
following:

(1) Computer readable storage medium storing dynamic server
provision program; and

(2) Dynamic server provision apparatus.

USE - For remotely establishing and maintaining accounts on server using LAN, WAN, internet.

ADVANTAGE - Since the command is executed by calling a corresponding function within the allowed module if the command is valid, unauthorized use of servers and storage medium is prevented more effectively.

DESCRIPTION OF DRAWING(S) - The figure shows the flowchart explaining the process of accepting and validating a command.

 AB- <PN> AU 200183647 A|
 AB- <NV> NOVELTY - Financial transactions are managed by performing an
 authentication process for a predicted transaction by an **account**
holder , performing an **authorization** process for a particular
 transaction having actual transaction amount and time upon presentation
 of the transaction signature, and performing an account process for the
 particular transaction.|
 AB- <BASIC> DETAILED DESCRIPTION - Managing of financial transactions
 involves performing an authentication process for a predicted
 transaction by a particular **account holder** ; performing an
authorization process for a particular transaction having actual
 transaction amount and time upon presentation of the transaction
 signature including verifying that the presented transaction signature
 matches the transaction signature for the predicted transaction and the
 actual transaction amount matches the predicted transaction amount and
 the actual transaction time matches the predicted transaction time; and
 performing an account process for the particular transaction as a
 result of a successful authorization process including reconciling the
 predicted transaction amount and the actual transaction amount for the
 particular account holder. INDEPENDENT CLAIMS are included for the
 following:
 (1) A financial transaction server comprising a communication
 interface, a data processing system including resources for managing
 the financial transactions as above;
 (2) An article of manufacture comprising a machinable readable

storage medium, and a computer program stored on the medium with resources for managing financial transactions as above;and

(3) A method for automated authentication, authorization and accounting for financial transactions comprising establishing an authenticated record for a predicted transaction by an **account holder**, establishing an **authorization** record for a particular transaction, matching the authorization and authentication records, and reconciling the predicted and actual transaction amounts for the account holder.

USE - For managing financial transactions useful to the current and upcoming software, hardware and electronic commerce technologies.

ADVANTAGE - The invention enables legal financial account holders to perform buy/sell or withdraw/deposit financial transactions without disclosing private personal information to the transaction counterparts while preserving highly elevated and enhanced security and fraud protection as compared with conventional methods. It allows a financial account holder to cut off bank tellers from their private personal files during withdraw/deposit transactions and to cut off merchants/sellers/vendors from consumers private personal information during financial transactions. It creates the authentication stage architecture of financial transactions, thus making the authentication stage of financial transactions a transaction specific one, e.g. it can be used just only for one particular financial transaction. It enables merchants/sellers/vendors to request financial institution back offices to authorize and to account financial transaction just for one particular financial transaction requested by financial account holder. It allows consumers having membership with any financial institution to perform financial transactions in a highly secure and private manner. Financial account holder private personal information need not to be disclosed to a party at the point of sale or a bank teller. Consumers can perform financial transactions with financial institution without privacy and security concerns.

DESCRIPTION OF DRAWING(S) - The figure shows a flow diagram of the embedded privacy and security layer (EPSL) architecture.

pp; 55 DwgNo 3/9|

AB- <TF> TECHNOLOGY FOCUS - MECHANICAL ENGINEERING - Preferred Method: The predicted transaction amount and time and transaction signature are stored for a predicted transaction in a database. The authentication includes establishing a communication session between the account holder and a financial transaction server. A the server, an account number and identification number for the account holder and the predicted transaction amount are accepted, and the transaction signature is produced and sent to the account holder. Information for the predicted transaction is identified in a memory at the server. The account holder is prompted to supply a combination of digits from a personal identification code. The authorization includes establishing a communication session between a party to the particular transaction and a financial transaction server. At the server, the presented transaction signature and actual transaction amount are accepted, and a time is compared for the particular transaction time with predicted time and the presented transaction signature and amount are compared with the predicted transaction amount and with the transaction signature. An authorization message is sent to the party.|

 AB- <NV> NOVELTY - A limited-use account number is issued for an existing
 account with the account issuer, which is activated only on request
 from the account holder using a transaction card, initiating a
 communication with issuer. The funds transfer is carried out
 corresponding to **authorization** made by **account holder**. The
 limited-use of the account number is deactivated for preventing it from
 usage until next request is activated by account holder.|
 AB- <BASIC> DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included
 for method for enabling an account number issued by another financial
 institution to be used to execute a financial transaction under limited
 conditions.
 USE - For executing a financial transaction in accounts maintained
 by holders with account issuers e.g. bank.
 ADVANTAGE - The deactivation of limited-use account number,
 permits the account holder to divulge the account number with a
 significantly reduced apprehension that an unauthorized person is able
 to gain access to funds in the account.
 DESCRIPTION OF DRAWING(S) - The figure shows a schematic diagram at
 account issuer side.

 AB- <PN> WO 200002150 A1|
 AB- <NV> NOVELTY - The method involves providing a Transaction Code to the
 customer for use in the transaction as a substitute for the account
 number of the customer. An Address Code is established for the customer
 which represents a delivery location for goods and/or services provided
 by the merchant to the customer. In order to authorize the transaction,
 the customer provides the merchant the Transaction Code such that the
 account number of the customer is not disclosed to the merchant.|
 AB- <BASIC> DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for:
 (1) a method of validating a financial transaction between a
 customer and a merchant;
 (2) a system for conducting a financial transaction between a
 customer and a merchant; and
 (3) a method of ensuring correct delivery of goods and/or services
 to a customer from a merchant as a result of a remote transaction
 between the customer and the merchant.
 USE - For Internet.
 ADVANTAGE - Conducts transaction which does not require complex
 encryption technologies, requires customer or **account holder** to be
 responsible for **approving** transaction, requires prearranged delivery
 address to be supplied by customer and does not require customer to
 transmit their card number or account information across an open and
 unsecured communications channel.
 DESCRIPTION OF DRAWING(S) - The figure shows a block diagram of
 system used for conducting a financial transaction between a customer
 and a merchant in accordance with the invention.

 AB- <NV> NOVELTY - The method involves linking two persons to a financial
 account which is used for the transaction. Data is received from the
 third party identifying the financial account and the third party. An
 inquiry is made as to whether the first person desired to communicate
 with the second person based on the data identifying the financial
 account. A response to the inquiry is received from the first person.
 Communication between the two response is initiated based on the
 response.|
 AB- <BASIC> DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for a
 method for facilitating communication between an account holder and a
 user so that the **account holder** may **authorize** a card based
 transaction between the user and a merchant, an apparatus for
 facilitating communication between a first person at a first location
 and a second person at a point of sale location so that the first
 person may authorize a transaction between the second person and a
 third party at the point of sale location.
 USE - For enabling person holding credit card account to control
 second person's use of credit card linked to account.
 ADVANTAGE - Allows account holder to communicate with user
 executing card based transaction and remotely control authorization or
 denial of it contemporaneous with and based on circumstances
 surrounding transaction.
 DESCRIPTION OF DRAWING(S) - The figure shows a schematic
 illustration of an apparatus for facilitating communication between two
 persons so that the first person may authorize a transaction between
 the second person and a merchant.

 AB- <NV> NOVELTY - The central computer has database of card issuers. The
 issuer computer has database (208) of spending limit pre- **approved** by
account holder and card issuer (206) contact method for contacting
 the account holder. The central computer passes the **account holder**
 's refusal or **approval** of pending transaction by communication device
 to the merchant.|
 AB- <BASIC> DETAILED DESCRIPTION - The credit card issued to a card user
 from a card issuer, has card number and account number. The
 communication between account holder and central computer is performed
 through cellular telephone. The central computer communicates the
 information of purchased item, transaction place, identity of the
 merchant regulating the approval and the name of the card user. The
 database information are accessible by the central computer and issues
 computer which are components of either a single computer or a computer
 network. An INDEPENDENT CLAIM is also included for monetary transaction
 authorizing method.
 USE - For allowing parent to control the user of ancillary credit
 or debit transaction card issued to a child. For procurement of goods,
 services and distribution of currency.
 ADVANTAGE - As ancillary cardholder receives authorization from
 central computer through communication device, procurement of goods and
 services is computed quickly.
 DESCRIPTION OF DRAWING(S) - The figure shows an illustration of
 network of monetary transaction authorizing system.

AB- <PN> WO 9914711 A2|
AB- <NV> NOVELTY - An authorization override request signal carries information about the transaction and/or the bank account to be charged and/or the expected change in the balance of the bank account, the authorization override request signal is converted into a message signal (31, 131, 351, 451, 551).transmittable through a digital mobile telecommunication network, in SMS mode of operation.|
AB- <BASIC> DETAILED DESCRIPTION - The message signal is transmitted to a mobile telephone set, with a call number specified by the person having the right of disposal over the bank account to be charged and suitable to send a return message signal. The transmission is carried out in SMS mode of operation, then from the return message signal (12, 112, 312, 412, 512) received through the telecommunication network, or from the lack of such a return message signal within a set period of time, a return signal that can be evaluated by a computer is deducted. An override authorization signal permits or rejects the information content of the return signal is generated, the override authorization signal is then used to either permit or reject the authorization of the usage.
USE - For debit card.
ADVANTAGE - Prevents unauthorized payments and unauthorized remittances, which successfully averts occurrence of damages.
DESCRIPTION OF DRAWING(S) - The figure shows a flowchart of the method according to the invention, where the bank requesting **authorization** and principal bank of **account holder** is the same.
Return message signal (12, 112, 312, 412, 512)
Message signal (31, 131, 351, 451, 551)

AB- <BASIC> JP 9319927 A

The apparatus has an iris image acquisition unit that photographs the iris of a transaction candidate, and obtains an iris information. A display unit (8) that displays various informations is provided.

The iris information is used to determine if transaction with the transaction candidate is permitted. When transaction is **permitted**, at least the **account name** and the typical transaction contents included in the account information are shown on the display unit.

ADVANTAGE - Transaction can be made without using ID card or passbook, and without inputting code number, by obtaining iris information on transaction candidate and permitting transaction according to iris information. Improves efficiency by displaying account information.

 FD- US 5351994 A G06F-015/30|
 LA- US 5351994(20)|
 AB- <BASIC> US 5351994 A

The appts includes an input device for performing an electronic information input process, into which a system operator enters information specifying a new payee previously unknown to the system and a draft to be generated on an account of that payee, the information including a financial institution identification number, a payee account identifier, and an amount to be drafted from the payee's account.

An institutional database comprises a financial institution identification information, an institution verification device for receiving the financial institution identification number and compering the financial institution identification number to entries in the institutional database. E.g. when the financial institution is found in the institutional database, the institution verification device retrieves identifying information about the institution and verifies the accuracy of the financial institution identification number.

USE/ADVANTAGE - For collecting funds from customer's checking account, when authorised without requiring that executed check be mailed to payee and generating authorised drafts on number of financial accounts belonging to number of different recipients. Provision for immediate debiting debtor's bank account when debtor authorises collection by telephone.

Declare E-mail Independence

Garfinkel, Simon;

Technology Review (Cambridge, Mass.: 1998) v. 105 no6 (July/Aug. 2002) p. 29

DOCUMENT TYPE: Feature Article ISSN: 1099-274X

ABSTRACT: People have tacitly surrendered substantial control over the medium of e-mail. Although many believe they own their own e-mail addresses, legally and technically the owner of the computer system behind the address controls all aspects of the account. Internet service providers can cancel e-mail accounts, give away user names, block accounts, and read e-mail without the **account holder's permission**. The simple solution to e-mail address portability is to obtain a unique domain name.

Microsoft Passport authentication service is an excellent concept, but privacy and security worries could make users afraid to use it. Similar worries could also slow the adoption of commercial Web services. For instance, one user who has about 50 active online site-registration identities spanning everything from travel and tech sites to an online newspaper subscription says he would like to automate access with such features as Passport Wallet Express Purchase service. However, he does not want Microsoft or any other entity to track the sites he visits, and he does not want to lose Passport-stored data to hackers. Microsoft is also concerned about this perception and has worked effectively to address it. For instance, at the recent Microsoft Professional Developers Conference (PDC), Microsoft explained that all information entered into Passport will be released only with the stated **permission** of the **account holder**. A user can also obtain a base-level Password account by simply providing a username and a password. However, Microsoft also has to protect the information, since not long after the PDC, a security opening in the Passport service was reported. Microsoft reacted by taking the system down and fixing the glitch, but more are likely to emerge.

GRADE: Product Analysis, No Rating

Processing payments is turning out to be a big bugaboo for U.S.-based firms attempting to conduct international e-commerce. Banks have to concern themselves about many issues, including incompatible transaction networks and money laundering. For eBay, which launched sites in Germany, the United Kingdom, and France, the primary difficulty has been facilitating payments. Online payment between buyers and sellers in Europe is much more difficult than in the U.S., since, for instance, German shoppers do not care to use credit cards online. Europe overall does not have an efficient, low-cost way to clear electronic checks between banks. No shared European system

exists that compares with the U.S.'s Automated Clearing House (ACH), which is shared by thousands of U.S. banks and the U.S. government. Disparate regulations from nation to nation in Europe create another speed-bump, but eBay and other e-merchants in Europe recently had a meeting with the German government to try and ease up on rules that do not allow an online merchant to accept direct debit **authorizations** unless the **account holder** signs a paper document. Among other topics covered are payment conventions in Scandinavian countries; the advantages of direct debit payments; and efforts under way by several banking organizations in Europe to 'realize document defining pan-European payment authorizations by year-end for e-commerce and traditional business purchasing.'

Foreigners allowed to make RM cash deposits
MALAYSIA: CURRENCY CONTROLS EASED FURTHER
Business Times Malaysia (XAR) 21 Oct 1999 p.18
Language: ENGLISH

Non-residents in Malaysia are now permitted by Bank Negara Malaysia <central bank> to make ringgit cash withdrawals of up to RM 10,000 from their external accounts. Under the relaxed exchange controls guidelines, the amount withdrawn from the special external account will be recorded as principal sum in the account. In addition, non-residents can also deposit up to RM 10,000 ringgit cash into their special external accounts which will be taken as principal where there is documentary proof that the ringgit cash were retreated from profit gained from selling foreign currency to an **authorised** commercial bank or from the **account holder**'s external accounts. The RM 10,000 cap, however, does not apply to foreigners who work or study in Malaysia who will have no limit for crediting ringgit funds.

Northern Rock climbs down on notice periods
UK: NOTICE PERIODS SUSPENDED BY NORTHERN ROCK
The Times (TS) 19 May 1998 p.29
Language: ENGLISH

The UK bank Northern Rock has announced the suspension of all notice periods on its savings accounts. The news comes as the Office of Fair Trading (OFT) begins its investigation into the banks activities. The latest announcement by the bank comes in response to its reorganising savings accounts and reducing rates without any warning being given to the customers. **Account holders** were then refused **permission** to transfer their money elsewhere without giving notification. The OFT investigation has prompted a response from the UK bank and it is now allowing customers to transfer their savings to higher paying accounts without a penalty being enforced. These customers have one month (May 19-June 19 1998) to do so. Transfers are being backdated to April 23 1998 when the changes were put in place by the bank and customers will be paid the difference in interest. The OFT investigation will begin on Thursday 21 May 1998.

Chekiang First Bank to launch Web service
HONG KONG: CFB TO LAUNCH NEW CF WEB SERVICE
Computerworld HK (XDP) 15 Jan 1998 P.2
Language: ENGLISH

Japan's Dai-Ichi Kangyo Bank subsidiary Chekiang First Bank (CFB) aims to launch a commercial trial of an Internet banking service called CF Web in Hong Kong. CFB plans to make the CF Web service available to 500 current bank clients on a first-come, first-served basis in January 1998. The CF Web banking system is based on Hewlett-Packard's (HP) Virtual Vault technology and developed by Hong Kong-based software developer and systems integrator Motif Asia. The system uses CFB-issued digital certificates and caller identification control for security measures. The CF Web service is targeted at personal and retail **account holders**. The service will **permit** clients to obtain the following services: - time deposits and interest rates information - change, place or renew time deposits - account balance and statement - request check books - transfer funds

Users of POSBLine telephone services can now pay their bills through \
SINGAPORE: NEW WAY TO PAY BILLS

The Straits Times (XBB) 28 Dec 1993 p.16
Language: ENGLISH

Singapore's POSBank has introduced a new bill payment system that **permits** its **account holders** of the POSBLine telephone service to make some payments through Teleview. The service allows holders to pay the bills of the Inland Revenue Authority of Singapore, the Public Utilities Board, Singapore Telecom, other town councils and bills charged at some country clubs. Account holders can tune to page 61861 on Teleview daily between 8.30 a.m. - 9.30 p.m. for the POSBank bill payment service. POSBank also allows passcard and current accounts holders to get the bank statements of the preceding month at the 30 self-service interactive terminals across the country. The statements can be obtained at the POSBankers terminals using the cash-on-line card and personal identification number.

English Abstract

A system for dynamic, real time transfer of money electronically from one individual to another without the need for either the transferor or transferee to have credit card or bank account, uses, for example, existing ATM networks. Real-time fund transfers can be further controlled based on selected criteria. The method includes depositing cash or check funds into a transferor primary account coupled to a financial network wherein the cash or check funds are immediately

available for transfer, transferring a portion of the funds to a transferee account which is a subaccount of the transferor primary account, and withdrawing funds from the transferee account using a transferee account access card and a personal identification number from any access point in the financial network. In alternative embodiments, funds can be deposited directly to transferee accounts. The system and method provide easy and convenient electronic money transfer with immediate availability of funds for money transfer from a sender's account without requiring either the sender or recipient to have a bank account or credit card. It is especially beneficial for members of the unbanked population.

French Abstract

L'invention concerne un systeme de transfert de fonds dynamique en temps reel par voie electronique d'un individu a un autre sans qu'il soit necessaire que l'auteur du transfert ou le beneficiaire du transfert possede une carte de credit ou un compte bancaire, ledit systeme utilisant des reseaux ATM existants. Les transferts de fond en temps reel peuvent etre egalement commandes en fonction de criteres selectionnes. Le procede consiste a deposter des fonds en especes ou sous forme de cheques dans un premier compte de l'auteur du transfert couple au reseau financier dans lequel les fonds en especes ou sous forme de cheques sont immediatement disponibles pour etre transferees, a transferer une partie des fonds sur le compte du beneficiaire du transfert qui est un sous-compte du premier compte de l'auteur du transfert, et a retirer les fonds du compte du beneficiaire du transfert a l'aide d'une carte d'accès au compte du beneficiaire du transfert et un numero d'identification personnel de n'importe quel point d'accès du reseau financier. Dans d'autres modes de realisation, les fonds peuvent etre deposes directement sur les comptes des beneficiaires du transfert. Ce systeme et ce procede permettent d'effectuer un transfert de fonds electronique facile et pratique, les fonds etant immediatement disponibles pour le transfert de fonds a partir du compte d'un expéditeur sans qu'il soit necessaire que l'expéditeur ou le destinataire possede un compte bancaire ou une carte de credit. Ce systeme est particulierement avantageux pour les personnes n'etant pas clients d'une banque.

French Abstract

La presente invention concerne un systeme informatique de transaction entre entreprises qui dans un mode de realisation prefere est destine a fournir des services de location de vehicules pour des utilisateurs a demande elevee comportant un portail de reseau Internet grace auquel l'utilisateur a demande elevee peut acceder a une pluralite de fournisseurs de services comportant un reseau informatique d'entreprise integre pour au moins un fournisseur de services de location de vehicules. Le reseau informatique de fournisseur de services de location de vehicules est configure pour l'interconnexion d'une pluralite de succursales de diversite geographique, presentant le catalogue de leurs vehicules de location disponibles et des programmes les concernant ainsi que pour la gestion de toutes les donnees de transaction concernant son entreprise. Le portail de reseau Internet permet une connectivite et une transferabilite universelles pour une association d'entreprises a plusieurs niveaux qui placent regulierement des demandes elevees d'achat de location avec son associe commercial et egalement les autres fournisseurs de services qui peuvent ou non avoir le meme systeme et logiciel informatique d'entreprise integre. L'utilisation du procede et de l'appareil de la presente invention permet de placer, de grands volumes de transactions de location, de les controler, de les modifier en cours d'operation, et de les conclure avec des operations de comptabilite financiere et paiement pratiquement sans intervention humaine.

English Abstract

A transaction authorization system (200) includes a client terminal (20) in the form of a computer (22) running a network browser. The computer (22) is connected to the internet (24). The system (200) also includes an account administration server (26) which is connected to the internet (24) and which hosts a web server which may be accessed by the network browser running on the computer (22). The system (200) further includes an account database (30) which stores a record of the status (i.e. disabled or enabled) of an electronic on line bank account. The system (200) is configured to enable a user, via the computer (22), to set the status of the account in the database (30). When a transaction request is issued to a merchant (201) the authorizing institution is able to interrogate the database (30) to determine the status of the account and thereby to authorize or decline the transaction.

French Abstract

L'invention concerne un systeme d'autorisation de transaction (200) comprenant un terminal client (20) sous forme d'ordinateur (22) sur lequel est installe un explorateur de reseau. L'ordinateur (22) est relie a l'Internet (24). Ce systeme (200) comprend egalement un serveur de gestion de comptes (26) connecte a l'Internet (24), qui heberge un serveur Web auquel on accede par le navigateur de reseau s'executant sur l'ordinateur (22). Par ailleurs, ce systeme (200) comprend une base de donnees de comptes (30) contenant l'enregistrement de l'etat (c.-a-d. autorise ou non autorise) d'un compte bancaire en ligne. Ce systeme (200) est configure pour permettre a l'utilisateur, via l'ordinateur (22), de definir l'etat du compte dans la base de donnees (30). Lorsqu'une demande de transaction est emise par le vendeur (201), l'organisme d'autorisation interroge la base de donnees (30) pour determiner l'etat du compte et autoriser ou refuser la transaction.

Detailed Description

... increasing problem. Typically, acquired bank account details are used to conduct illegal transactions without the **authorisation** of an **account holder**. This is particularly prevalent in the light of

Internet

0 based transactions, or other transactions...exchange rates, shipping costs, or the like.

It is to be appreciated that the transaction **authorisation** system allows an **account holder** to designate a bank account as enabled or disabled, i.e. to provide authorisation for any transactions performer., using the account. Thus, the transaction **authorisation** system need only manage the **account holder** interface, the **authorisation** interface and the account status database, without handling the actual account. However, it is also...

...system may include an authentication facility for authenticating the identity or capacity of the bank **account holder** before **permitting** the **account holder** access to the account holder interface.

The security authentication facility may be provided by the account holder interface. Instead, the security authentication facility may be provided via a third party **authorisation** facility.

The **account holder** interface may be configured to access and interrogate the account status database to obtain a...1 0 selectively designating a bank account status as enabled, on the instruction of an **account holder**, thereby to **authorise** transactions performed using the bank account; and recording the enabled status of the bank account...

...account is designated as enabled.

The method may include authenticating the identity of the bank **account holder** before **permitting** the status of the bank account to be changed.

The method may include logging a...as deactivated or disabled, and all transactions performed will not be considered to have been **authorised** by the **account holder**. The

1 5 account holder is thus provided with a facility to temporarily enable or...holder for a username and password. After a predesignated number of failed login attempts, the **account holder** may be ejected from the **authorisation** process 36.

In an alternative embodiment of the invention, the 1 0 authentication process may...

...the account holder, and

not the actual online bank account or credit card. Once the **account holder** has been authenticated, the transaction **authorisation** process 20, similarly continues with process 40.

Once the account holder has been authenticated, the...106 also includes an authorisation request feedback field 1 30, which may indicate to the **account holder**, in real-time, that **authorisation** has been given for a particular transaction. This is indicated, by changing the colour or...

...thereby to reduce the occurrence of unauthorised or fraudulent transactions.

Once the transaction has been **authorised** and completed, the **account holder** can then disable the account, by closing the online bank account user interface 106.

it...Thus, even though most of these credit card transactions on the Internet use encrypted data **transfer** to protect **third parties** from intercepting the transmitted credit card details, encryption alone does not resolve all security problems...

Claim

... **inclusiva**, which includes an authentication facility for authenticating the identity or capacity of the bank **account holder** before **permitting** the **account holder** access to the account holder interface.

5 A system as claimed in any one of...

...17 or claim 18, in which the method includes authenticating the identity of the bank **account holder** before **permitting** the status of the bank account to be changed.

20 A method as claimed in...

English Abstract

A method is provided for protecting a payment instrument in non-face-to-face transactions. The payment instrument is issued by an issuing entity and associated with an authorized instrument holder. The authorized instrument holder is subject to authentication by trusted third party with whom the payment instrument holder has previously registered. The method includes: the authorized instrument holder communicating with the issuing entity to block, on a default basis, authorization of the payment instrument for non-face-to-face transactions unless authorized to unblock the payment instrument by the trusted third party; prior to a non-face-to-face transaction, the authorized instrument holder communicating with the trusted third party to subject him or herself to authentication and to request that the payment instrument be unblocked; and the trusted third party authenticating the authorized instrument holder, and if the authentication result is positive, communicating with the issuing entity to request unblocking of the payment instrument.

French Abstract

L'invention concerne un procede destine a proteger un instrument de paiement dans des transactions qui ne se deroulent pas en tete a tete. L'instrument de paiement est emis par une entite emettrice et associe a un detenteur d'instrument autorise. Ce dernier est soumis a une authentication par un tiers habilite aupres duquel le detenteur d'instrument de paiement s'est prealablement enregistre. Le procede est caracterise en ce qu'il comprend les etapes suivantes : le detenteur d'instrument autorise communique avec l'entite emettrice en vue de bloquer, au vu d'un default, l'autorisation de l'instrument de paiement d'effectuer des transactions qui ne se deroulent pas en tete a tete, a moins d'etre autorise a debloquer l'instrument de paiement par le tiers habilite ; avant d'effectuer une transaction non en tete a tete, le detenteur d'instrument autorise communique avec le tiers habilite en vue d'etre soumis a l'authentication et de demander que l'instrument de paiement soit debloque ; apres quoi le tiers habilite authentifie le detenteur d'instrument autorise et, si l'authentication est positive, il communique avec l'entite emettrice en vue de demander le deblocage de l'instrument de paiement.

Fulltext Word Count: 22802

English Abstract

Consumer directed transfers of funds over the Internet are provided by a combination of systems and networks, including the Internet, email, and the Automated Clearinghouse system (ACH). A host system provided by a funds transfer service manages requests of senders to transfer funds and further manages responses of receivers to claim funds. The host system allows the sender to initiate the funds transfer by specifying the amount of the transfer and information for contacting the receiver, without the need to specify the account of the receiver for receiving the funds. Instead, the host system contacts the receiver and informs the receiver of the available funds; the receiver can then provide the necessary target account information for completing the funds transfer. The ACH is used to effect the transfer of funds, with the host system providing instructions for ACH entries to its financial institution using account information separately received from the sender and receiver. The credit risk associated with originating ACH entries is reduced by use of the Point of Sale system to verify sufficient funds in the sender's account by comparing the closing balance of the day the funds transfer is requested with the transfer amount. Sender fraud is reduced by comparing a sender provided balance (or check number/amounts) with an account balance acquired through automated means such as the POS system or ATM network.

French Abstract

Selon l'invention, des transferts de fonds, diriges par des clients et effectues sur l'Internet, comprennent une combinaison de systemes et de reseaux, notamment l'Internet, le courrier electronique et le systeme de chambres de compensation automatisees. Un systeme hote constitue par un service de transferts de fonds gere des demandes de transferts de fonds, faites par des expediteurs, et gere en outre les reponses de reclamations de fonds, faites par les destinataires. Ce systeme hote permet qu'un expediteur demarre un transfert de fonds en specifiant le montant du transfert et les informations permettant d'entrer en contact avec le destinataire, sans avoir a preciser le numero de compte du destinataire qui doit recevoir les fonds, car, c'est le systeme hote qui va entrer en contact avec le destinataire et informer celui-ci de la disponibilite des fonds, le destinataire pouvant alors fournir les informations necessaires relatives au compte cible, aux fins d'achevement du transfert de fonds. La chambre de compensation automatisee est utilisee pour executer le transfert de fonds, le systeme hote fournissant les instructions permettant a la chambre de compensation d'entrer dans son institution financiere a l'aide des informations relatives aux comptes, recues separement de l'expediteur et du destinataire. Le risque de credit, associe aux entrees de la chambre de compensation d'origine, est reduit par l'utilisation du systeme de point de vente, lequel permet de verifier si le compte de l'expediteur dispose de fonds suffisants, par comparaison entre le solde de cloture etabli le jour ou le transfert de fonds est demande, et le montant du transfert. Toute fraude du fait de l'expediteur est pratiquement supprimee par comparaison entre un solde fourni par l'expediteur (ou numero/montants du cheque) et un solde de compte, acquis par des moyens automatiques, tels que le systeme de point de vente ou le reseau MTA.

English Abstract

A method and apparatus for securing software to reduce unauthorized use include associating a password (16) or series of passwords (18) with each copy or group of authorized software and requiring entry of a first password obtained from the developer or authorized representative (24) of the software after exchanging registration information (38). The method and apparatus may also require entry of a second password from the series associated with the software to continue using the software. A password (16) or authorization code series may be associated with each authorized copy or with a group of copies such as those distributed to a particular organization or site (32). Preferably, subsequent passwords (16) or authorization codes are obtained from an authorized software developer (24), manufacturer, or distributor which gathers current information from the user (30) to monitor compliance with licensing restrictions. The number and frequency of required password updates may be regular or irregular. A code which disables the software may be communicated if the manufacturer determines that the user (30) is an unauthorized user.

French Abstract

L'invention concerne un procede et un dispositif de securisation d'un logiciel, destines a reduire un usage non autorise du logiciel, le procede consistant a associer un mot de passe (16) ou une serie de mots de passe (18) a chaque copie ou groupe de logiciels autorises, et a exiger l'entree d'un premier mot de passe obtenu a partir du developpeur du logiciel ou du representant autorise (24) de celui-ci, apres echange d'informations d'enregistrement (38). Ce procede et ce dispositif peuvent egalement exiger l'entree d'un second mot de passe a partir de la serie associee au logiciel pour la continuation de l'utilisation du logiciel. Un mot de passe (16) ou une serie de codes d'autorisation peut etre associe a chaque copie autorisee ou a un groupe de copies, tel ceux distribues a une organisation ou a un site (32) en particulier. De preference, des mots de passe (16) ou codes d'autorisation ulterieurs sont obtenus a partir d'un developpeur (24), fabricant ou distributeur de

logiciels autorise, lequel recueille des informations actuelles a partir de l'utilisateur (30) afin de pouvoir surveiller si cet utilisateur observe les restrictions de l'octroi de licence. Le nombre et la frequence des mises a jour des mots de passe exigés peuvent etre reguliers ou non. Un code mettant hors service le logiciel peut etre communique si le fabricant determine que l'utilisateur (30) est un utilisateur non autorise.

English Abstract

A system is described in which an account holder may electronically transfer funds from a preestablished account (30) to a third party recipient (34) and then receive a subsequent accounting of how the money was actually spent. Limits may be set on how the money is spent. Computer-based methods for operating the systems of the present invention are also disclosed.

French Abstract

L'invention concerne un systeme grace auquel un titulaire de compte peut transferer electroniquement des fonds d'un compte preetabli a un tiers destinataire et recoit ensuite un relevé de compte faisant état des sommes d'argent reellement depensees. Il est possible de fixer un plafond de depenses. L'invention concerne egalement des procedés informatises permettant de faire fonctionner les systemes faisant l'objet de la presente invention.

The system consists, in outline, of a hub, (101), which receives an input from a customer's computer, (102), validatea and acknowledges the input and reformats it as necessary. It is transmitted to a payments router (103), which will be located in the chief office of the bank.

The payment router analyses the linput, determines the route for making the payment, generates the payment instructions, receives confirmation to the hub, and generates advice notes, reports, transaction logs, and any error messages or requests for manual intervention that may be necessary.

ADVANTAGE - All transactions may be recorded in transaction log file to provide complete audit trail. (First major country equivalent to LU--87869)

Abstract (Basic): JP 2003006711 A

NOVELTY - A prime contractor (10) establishes the **main account** (210) and sub-account (211) and inputs **cash** transfer message for transferring **cash** from sub-account to a sub-contractor (11). the sub-contractor withdraws the **cash** by inputting replying message to the prime contractor.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for automatic **cash** dealing method.

USE - Automatic **cash** dealing system.

ADVANTAGE - Communication between the prime and sub-contractors is improved by enabling input of messages in convenient format.

DESCRIPTION OF DRAWING(S) - The figure shows the operation sequence of the automatic **cash** dealing method. (Drawing includes non-English language text).

 Provisional application US 2000225168

Abstract (Basic): US 20020120584 A1

NOVELTY - A payment account number secret key is used to generate a transaction message authentication code. An authorization request message is generated and forwarded to a check site (18) over a network (16) to verify the authenticity of the code, using the secret key. The authorization request message is responded based on the available funds and the transaction amount.

USE - For conducting secure electronic payments through network such as Internet, for e-commerce transactions.

ADVANTAGE - Eliminates the need of utilizing pseudo or proxy account numbers to replace a real virtual primary account number. Hence eliminates the need for chargebacks to be sent to a central site and the need for retrieval request made by card holders after transactions are posted to their billing statements and the need to create and manage the storage of transaction logs needed to translate special payment account number to real account number.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of secure electronic payment system.

Abstract (Basic): WO 200261536 A2

NOVELTY - The payment system provides for online receipt and review of bills, and allows a customer to optionally select several alternative secondary accounts for payment in the event that payment cannot be made from a **primary credit account**. The secondary account may be another credit account, a checking account a brokerage account, or another type of account.

DETAILED DESCRIPTION - Actual payment is accomplished by electronic settlement of a credit transaction, **electronic funds transfer**, or by printing and physically delivering a paper check. The customer using the system receives notification concerning the success or failure of the transaction.

USE - To enable paying customer to make payment to a payee in a networked environment using a credit card, revolving credit, or other credit account.

ADVANTAGE - Enables customers to make payments from accounts other than checking accounts e.g. credit accounts.

DESCRIPTION OF DRAWING(S) - The drawing shows a block diagram of the system.

Abstract (Basic): KR 2002005896 A

NOVELTY - A system for an account transfer and a depositing/paying process between financial institutions through issuing cyber money and a method for an account transfer and a depositing/paying process using the system are provided to perform a depositing/paying process freely within a fixed credit grant range.

DETAILED DESCRIPTION - A cyber account of a client deposits/pays an actual thing security supplied from a client and cyber money being issued in an actual thing security range. A cyber account of a service company transacts the cyber account of a client and a directly cyber money. A **main account** is opened in the first financial institution and the second financial institution for an actual depositing/paying process using **cash** in accordance with a depositing/paying amount of

the cyber account. A control unit controls the depositing/paying amount of the cyber account and the depositing/paying process of the **main account**. The process is described as follows. The client inputs contents of an account transfer and a depositing/paying process. The contents of the account transfer and the depositing/paying process are transmitted to the control unit(2). Cyber money is moved from the cyber account of the client to the cyber account of the service company in accordance with the transmitted depositing/paying amount details(3). The corresponding amount of money is paid from the **main account** of the service company to an account designated by the client in accordance with the transfer detail(4).

AU 200227009 A H04B-000/00 Based on patent WO 200245278

Abstract (Basic): WO 200245278 A2

NOVELTY - The method involves receiving a value transfer request transmitted from an electronic payment device reader. The request includes identifying information for a source virtual lock box and a collection virtual lock box, and includes a value transfer amount that corresponds to a value of barter received by a user of the electronic payment device reader to cause transmission of the value transfer request.

Value that corresponds to the value transfer amount is electronically debited from the source virtual lock box. The value is credited to the collect virtual lock box in accordance with the value transfer request.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for an electronic **funds** management system and for an electronic payment device reader.

USE - For **electronic funds transfer** management system.

ADVANTAGE - Allows consumers to use **cash** to access world-wide electronic financial transactions network.

DESCRIPTION OF DRAWING(S) - The figure shows the invented **funds** management system.

Abstract (Basic): WO 200205192 A1

NOVELTY - The method involves receiving enrolment information from a user for an on-line payments service. The user's designation of a **source account** is received for withdrawing **funds** for the on-line payments. A transaction account is provided for the user as a money deposit account with an account number that the user can use as a source and a destination of **funds** and with at least one of several service levels. The user is allowed to have **funds** reside in the transaction account.

The user is allowed to use the **funds** residing in the transaction account for at least one of making an on-line payment, making an on-line purchase, making an off-line purchase, making a **cash** withdrawal, making a credit account payment, making a bill payment or making an international payment.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for a system for making on-line payments.

USE - For e-commerce.

ADVANTAGE - Allows payments to be made using any credit card, checking account or savings account to facilitate an on-line transaction. User can view all financial information in one go. Allows Internet bill paying.

DESCRIPTION OF DRAWING(S) - The figure shows key components and the flow of information between key components for a person-to-person payment.

Abstract (Basic): KR 2001000518 A

NOVELTY - A **cash** dispenser system using **main account** and sub account, and payment method of EC using the same are provided to offer the environment which enables a safe payment for the transaction under the condition that the important information of an account owner can be opened, by giving the subsidiary account that has not a balance at ordinary times to the account owner without the need for new facilities.

DETAILED DESCRIPTION - An account owner(310) receives a **main account** (380) and a subsidiary account(390) according to the contract with a financial agency(360). The internet(320) is connected to an internet connection device(420) for the account owner(310), to an electronic data processing system(370) for the financial agency(360) and to a shopping site(330). The shopping site(330) includes a web server(340) and a database(350), thereby implementing the EC. The account owner(310) accesses an ARS system(410) in the system(370) for the agency(360) using wired or wireless phone, and thereby remits the money for a bought product from the **main account** (380) to the subsidiary account(390).

 US 20020029164 A1 G06F-017/60 Provisional application US 99168325

Abstract (Basic): WO 200141029 A1

NOVELTY - User accesses a server computer on Internet and reserves parking space and the time for which the parking space is required in the parking facility. A payment is effected for the parking space by enabling the server computer to directly or indirectly transfer **funds** from user designated payment **source** to target **account**. Parking reservation configuration is received from server computer.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for the computer based parking reservation system.

USE - For electronically reserving parking space for vehicles of users of airports, attendees at sport events, concert and theater goers, shoppers.

ADVANTAGE - Improves **cash** flow, significantly reduces administrative pass, enables better database information and improved service quality. Permits generation of revenues from parking purchaser, transaction fees, software sales, website advertising and high end demographic list sales. Enables end user using personal or office computer, to access the server software and input data to reserve parking space, as the parking reservation management system is substantially handled through users of the system by inputting data at different computer which are processed by softier or server computer. Allows elimination of an attendant at the gate and permits the event management to collect parking fees in advance, since a personal or special access code is provided, when the reservation is made on the website. Provides value added service to building owners, as the system virtually eliminates all **cash** payment theft on monthly parking pass revenues.

DESCRIPTION OF DRAWING(S) - The figure shows the schematic diagram illustrating various levels of computers operating within parking space reserving method.

 AU 200062012 A G06F-017/60 Based on patent WO 200103033
 US 20020026418 A1 G06F-017/60

Abstract. (Basic): WO 200103033 A1

NOVELTY - A **main account** provided through a participating financial institution is divided into sub-accounts. One of the sub-accounts is provided with a credit balance upon receipt of a pre-payment from a customer, with the credit balance not exceeding the amount of pre-payment, to produce a pre-paid sub-account accessible by the customer and a designated third party by issuing an electronic debit card.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a system for providing an electronic debit card which is compatible with an existing network of credit cards.

USE - For providing anonymous, widely accepted electronic money for electronic commerce.

ADVANTAGE - Uses existing payment infrastructures rather than proprietary payment system or separate billing contract with each internet service provider. Provides a type of electronic **cash** for persons who do not have credit cards, which can be used anonymously, which can be used for small purchases particularly between individuals and whose susceptibility to fraud is limited to amount predetermined by user.

DESCRIPTION OF DRAWING(S) - The figure shows an overview of the interactions among four entities involved with the electronic debit card.

Abstract (Basic): WO 200036570 A1

NOVELTY - **Funds** from existing **source account** such as saving account, credit card account are transferred to service account held by a financial institution. A service is provided for supervising access to **funds** in service account by a minor. The minor is enrolled with the service which is capable of executing binding transactions with third party on behalf of the minor.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for electronic transaction executing apparatus.

USE - For executing electronic commercial transactions.

ADVANTAGE - Control and supervision of access to the minor service account can easily be maintained.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of electronic transaction executing apparatus.

JP 2000113076 A 18 G06F-019/00

Abstract (Basic): JP 2000113076 A

NOVELTY - Account registration information is produced from an input code number corresponding to a deposit account information. The account registration information is then informed to a secondary system by a **primary** system. The **account** information for registration and customer deposit information are compared. The secondary system annuls account registration information when comparison result mismatches.

DETAILED DESCRIPTION - The customer deposit account information and customer information containing transaction contract number are stored in their respective cards.

USE - For automatically **transferring money** from bank for paying bills for electricity, gas, aqueductus, telephone, credit card etc.,

from user's deposit account. For use in financial institution.

ADVANTAGE - As the system pays the payment of various bills by bank transfer automatically, complicated paper procedures by **money transfer** written request and passbook mark are eliminated. Enables utilization of ATM of a financial institution and terminal equipment of system of each enterprise. Provides bank transfer registration correctly and quickly. Eliminates disparity completely as it shares single data. Enables to raise the accuracy of **money transfer** system, economical efficiency and processing time, markedly.

DESCRIPTION OF DRAWING(S) - The figure shows the explanatory drawing of money card, deposit passbook and a credit card.

EP 981118	A2	E	48	G07F-017/32	

Designated States (Regional): AL AT BE CH CY DE DK ES FI FR GB GR IE IT
LI LT LU LV MC MK NL PT RO SE SI

Abstract (Basic): EP 981118 A2

NOVELTY - The processor credits a player's **main account** with pay-in **funds** and winnings and debits the **main account** with pay-out **funds**. The processor credits a player's secondary account with wager units carried over from a game and debits either account for a wager on a current game. The player is not allowed to transfer of **funds** from the secondary account to the player.

DETAILED DESCRIPTION - The system has a pay-in, a pay-out and a processor providing control signals for a player in dependence on the state of play of a game. **INDEPENDENT CLAIMS** are also included for a computer processor signal in a data transmission channel, a wager account management method for a hand of cards, an article of manufacture, and a computer system for managing wager accounts/

USE - Card games e.g. poker

ADVANTAGE - Increased entertainment alternatives with the ability to selectively play or pass a wager during game play.

DESCRIPTION OF DRAWING(S) - The drawing shows a top level flow chart.

Abstract (Basic): WO 9836368 A

The process for transferring funds from a source account at a first financial institution to a destination account at a second financial institution through a communications network involves receiving first data input with an input terminal and matching the first data with a record of a source account. The record is stored in a first host system and includes an indication of a type of currency maintained in the source account. Second data provided with the input terminal is received. The second data indicates a recipient account and verifies the validity of the recipient account. Third data provided with the input terminal is received.

The third data corresponds to a requested amount to be transferred from the **source account** to the destination account. The requested amount is input in a selected format which corresponds to the type of currency maintained in either the **source account** or the destination account. Subsequent to receiving authorisation to implement the requested transfer, the **funds** to be transferred are deposited into a transfer holding account which is then processed through a clearing system local to the second financial institution. Then the **funds** from the holding account are deposited to the destination account in the second financial institution.

ADVANTAGE - Allows secure transactions to take place in real time. Eliminates problems with changing currencies.

HU 221354	B1	G06F-017/60	Based on patent WO 9704411

Abstract (Basic): WO 9704411 A

The method for transferring (28) **funds** instantly to an account (30) such that the **funds** are available to the beneficiary at the time they are sent, involves using customer information (24) which can be automatically accessed by the system (20). The appropriate exchange rate and any fees to be charged to the account (26) are automatically computed and displayed to the user such that the user may authorise or cancel the transaction (22).

The user is also able to quantify the amount to be transferred in the currency of the originating account or the currency of the receiving account. Safeguards are provided to ensure that only authorised individuals have access to the accounts (32) and the **funds**, and immediate verification of successful completion or failure is made to the customer.

USE - Performing **money transfers** between financial institutions for credit to general ledger or customer accounts, in real time and in secure manner.

ADVANTAGE - Enables user to quantify amount to be transferred in currency of originating account or of receiving account, to maximise system flexibility

Abstract (Equivalent): US 5659165 A

A process for transferring **funds** through a communications network, comprising the steps of:

receiving first data input with an input terminal and matching said first data with a record of a **source account**, the record being stored in a first host system and including an indication of a type of currency maintained in the **source account**;

receiving second data provided with the input terminal, the second data indicating a destination account and verifying the validity of the destination account;

receiving third data provided with the input terminal, the third data corresponding to a requested amount to be transferred from the **source account** to the destination account, the requested amount being input in a selected format corresponding to the type of currency maintained in one of the **source account** and the destination account;

calculating a total debit amount to be debited to the **source account**;

displaying the total debit amount in the selected format and requesting authorization to implement a requested transfer; and

subsequent to receiving authorization to implement the requested transfer, transmitted an electronic message authorizing a credit to the destination account by the requested amount; and

subsequent to receiving authorization to implement the requested transfer, debiting the **source account** by the total debit amount.

FILED: July 10, 2001 (20010710)

ABSTRACT

PROBLEM TO BE SOLVED: To provide a terminal device, an Internet money saving method and program therefor for easily and effectively **transferring money** between accounts opened by a user by suppressing user's wasteful expense.

SOLUTION: Data or purchase reservation items inputted by an operation inputting part 12 are stored in a data storing part 13. An outputting part 15 outputs a prescribed output signal such as a still picture and voice in storing item data. A data calculating part 14 calculates the total amounts corresponding to the purchase reservation items stored in the data storing part 13. In the case a purchase reservation item is decided not to be bought, a user terminal 10 requests a connected financial institution terminal to transfer an amount corresponding to the purchase reservation item to a transfer destination account from a transfer **source account**. When the financial institution terminal receives the transfer request, the financial institution terminal performs transfer processing.

ABSTRACT

PROBLEM TO BE SOLVED: To provide an automatic **cash** transaction system, with which a message can be interactively exchanged for transfer and payment.

SOLUTION: In the configuration connecting a host computer provided with a storage means for audio/image messages and a plurality of automatic **cash** transaction devices 100 provided with audio/image input means, a main contractor 10 opens a **main account** 210 and a sub-account 211 and when the main contractor 10 performs transfer operation to a sub-contractor 11

by using a master card 200 for operating the **main account** 210 and stores a message in the host computer, the sub-contractor 211 watches the message from the main contractor 10 by using a slave card 201 for operating the sub-account 211 transferred from the main contractor 10 beforehand and on the condition that a reply message is to be inputted to the main contractor 10, **cash** can be paid.

ABSTRACT

PROBLEM TO BE SOLVED: To obtain a method by which transferring can be simple.

SOLUTION: In this transferring method for performing the transferring transaction of some amount in some transferring destination account, when at least the transferring destination account, some amount and a transferred amount from a transferring **source account** are inputted from a customer inputting part 19 as data, a main control part 16 calculates a difference between some amount and the transferred amount from the transferring **source account**. In the case of judging that the amount of **cash** inputted from a paper money inputting and outputting part 13 or a coin inputting and outputting part 14 is equal to or larger than the calculated difference, the part 16 processes transferring transaction to the transferring destination account from the transferring **source account** and processes transferring transaction to the transferring destination account by **cash**.

ABSTRACT

PROBLEM TO BE SOLVED: To reduce the load of a customer by enabling the customer to perform required procedures in a series of processing without repeating the same procedures for each business category with respect to a transaction between different business categories.

SOLUTION: When a financial commodity purchase request including information of the subscriber number and the keyword number of the customer, transaction contents, the amount of money of a transaction, etc., is transmitted from a customer terminal 1, it is transmitted to a securities company host 5 through a business condition integrating EB system 3. The securities company host 5 transmits a report text which includes a transfer **source account** (customer's account at a bank) and a transfer destination account (an account of the securities company itself at a bank) besides the subscriber number, transaction contents, and the amount of money of the transaction to the customer terminal 1 through the business condition integrating EB system 3. The report text is displayed as a message picture on the display part of the customer terminal 1. When the customer transmits his or her will of acceptance, a bank host 7 immediately executes processing procedures for **fund** movement from the customer's account to the account of the securities company. A report indicating that a series of procedures related to the purchase request from the customer terminal 1 has been completed is transmitted to the terminal 1 through the system 3.

ABSTRACT

PROBLEM TO BE SOLVED: To provide a bank center, etc., which efficiently performs various processing involved in the reception processing and reception of a **cash** supply request.

SOLUTION: The reception server 3 of this bank center receives a **cash** supply request from a facsimile 1 of a request source, returns confirmation note data and generates and stores request data. The server 3 receives an approval request from the transmission source of the confirmation note data, generates and returns an approval code and includes the approval code in the previously generated request data. The server 3 generates transfer data from the account of a request source to a bank account about the request **source account** designating **account** transfer and transmits it to an account system host 5. The server 3 accumulates supply amounts in each bank office about the request data and transmits results to a **cash** packaging

device 4. The server 3 acquires deposited data to the bank account, generates a list showing whether deposit from a client is completed by referring to request data whose supply date is the current day and the deposited data and transmits it to the facsimile 1 of the bank office.

ABSTRACT

PROBLEM TO BE SOLVED: To provide constitution capable of centralizedly managing **funds** in intra-enterprise accounts including foreign accounts or intra-group enterprise accounts.

SOLUTION: When red balances and active balances are transferred from account files lyb, lyc, lyd in non-secretary branches to corresponding pooling account files 2yb, 2yc, 2yd by a transfer means 3 within determined prescribed time, all succeeding processing events are substituted by processing to be executed between a **main account** file lx in a secretary bank A and the pooling account files lyb, lyc, lyd of the non-secretary branches. Then a totalization means 4 executes the necessary totalization of balance amounts such as red balances and active balances in these files lx, 2yb, 2yc, 2yd and a transfer execution means 6 executes transfer corresponding to a totalization result from the file lx to the files 2yb, 2yc, 2yd in the non-secretary branches based on a transfer instruction from a transfer instruction means 5.

FILED: June 23, 1998 (19980623)

ABSTRACT

PROBLEM TO BE SOLVED: To decide a min. **funds** movement money amount after recognizing the **funds** usage and requested money amount of a transfer

destination person by permitting a transfer source person to check the **funds** usage, the money amount and a message or the like which are set by means of the transfer destination person, adding consideration for **funds** raising and setting the actual **transfer money** amount.

SOLUTION: The transfer destination person inputs **funds** usage, the money amount and the message or the like through a consumer transaction facility by a **funds** movement request processing part 109. A **funds** movement setting processing part 110 displays the contents of **funds** movement request information (**funds** usage, the money amount and the message) as against the transfer source person who is registered by the transfer destination person in a transfer **source account** file 106 on a screen. The transfer source person retrieves balance information of one's present account and displays it on the screen after recognizing the display contents and the total value of plural **funds** movement requests or the like. The **funds** movement requests and the balance state of one's own account are considered, the **funds** usage of the respective request contents is checked, the propriety of **funds** movement is judged from the one with higher necessity and the actual **funds transfer money** amount is set.

APPL. NO.: 05-232849 [JP 93232849]

FILED: September 20, 1993 (19930920)

ABSTRACT

PURPOSE: To reduce the transfer time by receiving plural **cash** cards in one transaction into the equipment and grasping plural sets of account information.

CONSTITUTION: A transfer machine makes a request of insertion of one card to a customer according to a card insertion guidance at the start of transaction. Data of the card read by a magnetic card reader 102 are communicated to a center by a line control section 103 and a center processing section 106 confirms the validity of data such as 'bank name, branch name and account number'. When the data are confirmed to be valid, it is informed to the transfer machine and a registration number is retrieved to collate a password. Then insertion of a 2nd card is requested to the customer by the card insertion guidance. Then the center processing section 106 confirms its validity. Then the transfer machine guides the designation of an account of a transfer source/ transfer destination to the customer and the customer selects a transfer **source account** from **account** information received from the center 106 and displayed on a screen.

ABSTRACT

PURPOSE: To realize the reserved **fund** transfer transaction processing which executes by reserving **fund** transfer transactions of the next day thereafter to execute them in the **fund** transfer transaction processing system.

CONSTITUTION: When the designated transfer day of **fund** transfer transaction information transmitted from an external terminal 2 is the day, a **fund** transfer processing part 11 subtracts the amount of money of transfer from the actual balance of account and the temporary balance of account of an account in a transfer **source account** file 13 and adds the amount of money to the balance of an account in a transfer destination account file 15; but if the designated transfer day of the **fund** transfer transaction information is the next day thereafter, the part 11 subtracts the amount of money of transfer from the temporary balance of the account in the transfer **source account** file 13 and stores **fund** transfer reservation information in a reservation file 14. A reservation execution processing part 12 extracts **fund** transfer reservation information, where the transfer designated day is the day, from the reservation file 14 and subtracts the amount of money of transfer from the actual balance of the account in the transfer **source account** file 13 and adds the amount to the balance of account of the account in the transfer destination account file 15.

ABSTRACT

PURPOSE: To reduce the mental and operational burdens by providing a transaction control means which controls the transactions to the banking organs based on the electronic slips stored in a 2nd electronic slip store device.

CONSTITUTION: The electronic slips produced by an electronic slip production means 20 are stored in a 1st electronic slip store device 11. The desired one of these stored slips is copied and stored in a 2nd electronic slip store device 14 by a paying/receiving slip extracting means. Then a transaction control means controls the transaction to a banking organ based on the data on the slip stored in the device 14. That is, the data on the copied electronic slip are sent to the banking organ and the paying/receiving processing is carried out between the **corporate** and individual **accounts** of the banking organ. In such a way, the paying/receiving jobs are automated and therefore the **cash** control jobs are decreased for the members of a general affairs department.

PRODUCT NAMES: VoiceXML (842087)

TITLE: Talking the Talk: 'Welcome to your automated voice response unit...'

AUTHOR: Newell, Amy

SOURCE: Bank Technology News, v14 n12 p44(3) Dec 2001

ISSN: 1060-3506

RECORD TYPE: Review

REVIEW TYPE: Product Analysis

GRADE: Product Analysis, No Rating

VoiceXML is the basis for many new voice-activated banking features that use natural language speech recognition. Directed dialog and undirected versions have been available, with the former requiring specific answers such as 'yes' or 'no.' Undirected dialog systems are more flexible in recognizing language components and trying to execute requests. Undirected dialog-based systems are now available commercially, says an analyst. A leader in the speech recognition market is InterVoice-Brite, and products from its iVB Enterprise Solutions division can recognize more complex natural language that would, for instance, allow a customer to speak a request to **transfer money** from one count to another. iVB sets up all possible **source** and destination **accounts** and amounts as variables in a particular construct of words that can be rearranged when spoken. Recognition engines are better, and speed of processors that run engines are much faster. Among the market directions being addressed by speech recognition are customer service expectations, including 24-hour availability, shorter queues, and qualified, immediate problem resolution. Other customer service features to be supported include increasing numbers of **calls**, number of products supported, and number of customers. In addition, the systems are expected to reduce the cost of labor and provide return on investment (ROI) in a short time.

Money Funds To Test Checking Account Waters

Bank Mutual Fund Report, v5, n241, pN/A

June 16, 1997

Language: English Record Type: Fulltext

Document Type: Newsletter; Trade

Word Count: 249

Check writing features aren't new to the money **fund** business. More than three-quarters of the 670 taxable retail money **funds** have check-writing options and 81% of the tax-exempt **funds** have the same option. But most of these have limited checks to big-ticket items that carry a \$250 per check minimum. So, these **funds** are not really in the checking account market. Some **funds** offer unlimited check writing but with a catch, according to IBC Financial Data which tracks the money **fund** industry. For example, the Strategist Money Market **Fund** **permits** unlimited checks but **charges** \$2 per check, a fee structure that all but rules out using the **fund** as a **primary** demand deposit **account**.

But, said Peter Crane, who tracks money funds in the IBC Money Fund Report, "we..."

D. Fixed Allocation of Finance Charges

This innovative feature **permits** a larger percentage of finance charge collections to be allocated to investors after an amortization event, when **cash** is needed most. Before early amortization, investors receive their pro rata share of finance charge collections, and the seller receives its pro rata share. After an event is **triggered**, a portion of the seller's share will be made available to cover shortfalls in interest or servicing expense, or chargeoffs, in the investors' share. **Cash** flow simulations show that, even under stressful scenarios, this overallocation of finance charges provides a...

Electronic trading on futures exchanges

Sarkar, Asani; Tozzi, Michelle

Derivatives Quarterly v4n3 PP: 7-14 Spring 1998

ISSN: 1081-3268 **JRNL CODE:** DRVQ

WORD COUNT: 4102

... **Tozzi, Michelle**

...TEXT: market share held by U.S. exchanges has fallen dramatically: In 1997, U.S. exchanges **accounted** for 41% of the trading volume of exchange-traded products, compared with 65% in 1990... on prices.8 In particular, locals (floor traders who buy and sell for their own **accounts**) trade frequently and are important suppliers of liquidity.

Electronic trading systems are not likely to...members.

CONCLUSION

Search Report from Ginger D. Roberts

Electronic trading systems have become increasingly popular in the past decade and currently **account** for about one-fifth of volume on futures exchanges. Driving this rise in popularity is...
